

34 SERIES

AFFORDCARD

Product description

One component ink for screen printing on PVC sheets and polycarbonates employed in the manufacture of plastic cards. Cards printed with 34 SERIES hold the lamination. There are also special grades of gold and silver to overcome with these problems.

34 SERIES leaves in all these materials a thin, hard and well-adhered film with very high chemical resistance. It leaves no residual odour.

34 SERIES can also be applied as a top quality vinyl ink.

Recommended applications:

PVC and polycarbonate plastic cards.

Finish:

Gloss.

Presentation:

Only viscosity needs to be adjusted, depending on the job, factory temperature and impression speed.

Screens:

Emulsion with ARGAZOL-E (easy decoating) or ARGAZOL-UV (high performance and definition) with meshes from 90 to 150 meshes/cm.

Diluents:

D-200 as fast to normal and D-696 as normal to slow. Its adequate mixture gives a good behaviour in the screen and short drying times, between 5 and 20 minutes when dried to the air, depending on the material and the job, and in seconds when passes through a tunnel.

Other observations:

Due to the different lamination techniques, we encourage the user to make the previous essays in order to assure the adequate behaviour of the ink.

Security:

Carefully read the label directions and the tab Security of this ink.
